

# Proxess® Mobile Key (PMK)

iPhone &  
Android

For both  
ProxessIQ® &  
LoxIQ® Systems

**Proxess mobile credentials** deliver  
*Real-Time to the Offline.*

Cost and communications are traditionally at odds, necessitating compromise between security departments and management. Proxess mobile keys (PMK) bridge that gap, extending real-time rights modifications and audit uploading to and from your interior intelligent, wire-free locksets – with no additional infrastructure cost.

Proxess mobile keys provide an innovative user experience, automatically finding and displaying the authorized door with the strongest signal, allowing just a single tap to open any door in the system, no matter how large the deployment. Further, the PMK's Battery-Respect mode keeps your phone fresh, unlike the operation of other security apps that deplete the phone's battery and require touching a reader with your hand.

Including a checkbox for timed offline operation, the PMK accommodates usage in buildings with poor geographic or interior Cloud or WiFi connections.

The PMKs include all the options of our physical credentials, including Toggle, First-in, Pass-through and Lockdown. The PMK user experience is again enhanced, as this can all be accomplished on-approach rather than beginning the entry request process after you arrive at the door. Further, a lost phone is much more likely to be noticed and reported than a “misplaced” card, securing a vulnerability of traditional card-based systems.

Uniquely, the PMK concurrently delivers greater convenience, improved security and reduced cost.

Configuration options, by each User, include pinning a favorite or most used door to the “open” position on the screen and displaying the full, scrollable list of accessible doors.

The PMK is more like a wallet than a single key, as a single phone can include a virtually unlimited number of different systems that it can access, perfect for multiple site, system and customer operations.

## FEATURES

<b>CONNECTIVITY</b>	BLE comms using both Apple iOS & Android phones and cloud synchronized over WiFi & mobile networks, including rights across multiple sites and systems.
<b>REAL-TIME</b>	Issue, update & revoke mobile keys, open doors, initiate Lockdowns to always-awake Proxess locksets and transmit lock events and notifications to the Proxess software in real-time.
<b>ALL-DOORS EXPANSION</b>	Expand your current perimeter-only EAC system to any interior door with a Proxess lockset, at near price-parity to mechanical Grade 1 locks, while upgrading to secure and convenient mobile keys.
<b>RE-USABLE</b>	Purchase mobile keys once and recycle/re-issue them to new employees and visitors, keeping costs low and your database clean.
<b>TOUCHLESS DELIVERY</b>	Remotely and instantly issue temporary keys to visitors and contractors. Update employee access rights without an office visit.
