

Access Control at a price that competes with Grade 1 locks.

Proxess delivers a solution that can be used on any door and can provide controls and tracking of mobile credentials (phones) as well as traditional cards, fobs and other options.

Lockdown

- Local, at the door - At the sound or sight of an event
- Vicinity, Mobile credential - Near the sound or sight of an event
- Global, Remotely - In the administration software

Health & Safety

Can your locking system do this?

- Contact tracing
- Pandemic door restrictions
- Social distancing safeguard
- Wellness-check tracking
- Pandemic cleaning verification
- Local shelter-in-place control

Security

- Key usage tracking!
- Lock audits
- Enforced rights refreshing
- Anti-tailgating
- 6-layers of security/encryption
- Grade 1 hardware
- Photo verification on mobile credentials

Convenience

- Re-assignable mobile credentials
- 5-minute cylindrical installation/no door prep
- Wire-free: No bridges or infrastructure required
- Cost effective for all doors
- Partitioned database for multiple sites/buildings
- Auto-ranging mobile credentials
- Remote & off-hour credential issuance

Rethinking Access Control Design & Deployment

First of its kind Interior Door Locking system

Traditional perimeter door access control systems are expensive and rarely provide depth to their interior coverage. Try adding traditional wireless locksets and you'll bear the cost burden of a software toll and require gateways, along with their network drops, ports and power backup, thereby doubling to tripling the per door cost of Proxess locksets.

Supporting an unlimited number of doors and users, you'll never run out of room and our smart lock upgrades can even be performed as regular mechanical lock retrofits/replacements.

With just a screwdriver, install one Proxess lock and you have begun your access control system, without interfering with the learning day.

Proxess is unique in providing end-to-end in-house manufacturing design, programming and support, based in Denver, Colorado. This ensures our products remain affordable, recurring costs are dramatically reduced and upgrades and enhancements will be trouble-free, as everything will always work seamlessly within the Proxess ecosystem.

And our innovation doesn't stop there, as Proxess incorporates industry leading lockdown, health safety and security solutions into each lock.

True Key Elimination

With all the talk of a keyless future, what's been lost is the inability to combine an (essential) emergency key backup with verification of its usage. Proxess now provides the first true key elimination tool by recording the use of the emergency key, reporting it to the software and delivering it as a notification to an administrator. Bringing accountability and tracking of key-holders will assist you in finally eliminating them, along with the costs and risks related to key loss, duplication, theft and especially avoidance of rekeys.

Talk meets action.
