

Proxess Mobile Credential (PMC)

iPhone &
Android

For both
ProxessIQ™ &
LoxIQ™ Systems

Proxess mobile credentials deliver
Real-Time to the Offline.

Cost and communications are traditionally at odds, necessitating compromise between security departments and management. Proxess mobile credentials (PMC) bridge that gap, extending real-time rights modifications and audit uploading to and from your interior intelligent, wire-free locksets – with no additional infrastructure cost.

Proxess mobile credentials provide an innovative user experience, automatically finding and displaying the authorized door with the strongest signal, allowing just a single tap to open any door in the system, no matter how large the deployment. Further, the PMC's Battery-Respect mode keeps your phone fresh, unlike the operation of other security apps that deplete the phone's battery and require touching a reader with your hand.

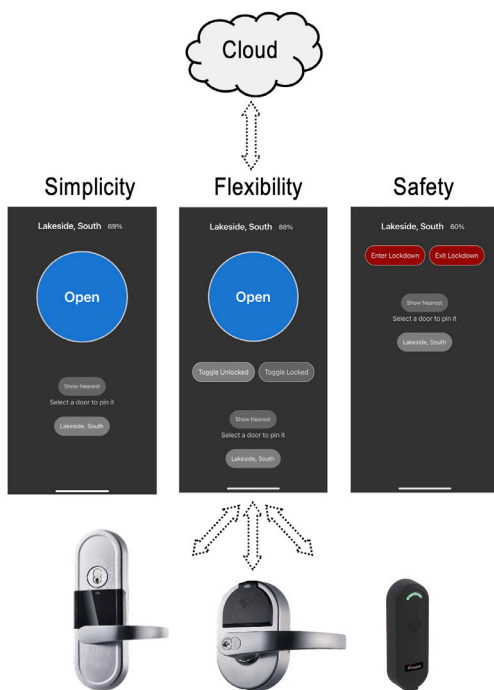

Including a checkbox for timed offline operation, the PMC accommodates usage in buildings with poor geographic or interior Cloud or WiFi connections.

The PMCs include all the options of our physical credentials, including Toggle, First-in, Pass-through and Lockdown. The PMC user experience is again enhanced, as this can all be accomplished on-approach rather than beginning the entry request process after you arrive at the door. Further, a lost phone is much more likely to be noticed and reported than a “misplaced” card, securing a vulnerability of traditional card-based systems.

Uniquely, the PMC concurrently delivers greater convenience, improved security and reduced cost.

Configuration options, by each User, include pinning a favorite or most used door to the “open” position on the screen and displaying the full, scrollable list of accessible doors.

The PMC is more like a wallet than a single credential, as a single phone can include a virtually unlimited number of different systems that it can access, perfect for multiple site, system and customer operations.

FEATURES

CONNECTIVITY	BLE comms using both Apple iOS & Android phones and cloud synchronized over WiFi & mobile networks, including rights across multiple sites and systems.
REAL-TIME	Issue, update & revoke mobile credentials, open doors, initiate Lockdowns to always-awake Proxess Locksets and transmit lock events and notifications to the Proxess software in real-time.
ALL-DOORS EXPANSION	Expand your current perimeter-only EAC system to any interior door with a Proxess lockset, at near price-parity to mechanical Grade 1 locks, while upgrading to secure and convenient mobile credentials.
RE-USABLE	Purchase mobile credentials once and recycle/re-issue them to new employees and visitors, keeping costs low and your database clean.
TOUCHLESS DELIVERY	Remotely and instantly issue temporary credentials to visitors and contractors. Update employee access rights without an office visit.

ADDITIONAL FEATURES

✓	Real-time credential validation	✓	Vicinity & local Lockdown
✓	Real-time audit transfer	✓	Real-time Admin Notification of Lockdown
✓	Timed, offline operation option	✓	Flexible User operations: Simple, Flexible, Complex/Capable
✓	Automated “nearest door” display	✓	Toggle & First-in modes
✓	Re-programmable, forever credentials	✓	Options to Pin your favorite or list all your doors
✓	Battery-Respect Mode	✓	Apple & Android phone and tablet compatible
✓	No touching the reader needed for wake-up	✓	Multiple site & system compatible

HOW TO ORDER

NX-MC-25-S License for 25 mobile credentials
 NX-MC-100-S License for 100 mobile credentials
